Summary

A little progress was in studying ROS2 and writing the paper, since this week was the midterm period, most of the office hours were spent preparing for the presentation on Friday and the presentation ended successfully.

What C.C completed this week:

- Prepared the presentation for the midterm
- Wrote the script for the presentation
- Made a PowerPoint for the presentation
- Had a meeting with Minji to get some feedback
- Wrote chapter 3's second paragraph
- Took a seminar
- Had a meeting with Professor Eric to discuss the robot

Things to do by next week

- Will study ROS2 tutorials from Intermediate to Miscellaneous
- Will make forward distance node utilizing LiDAR
- Will finish making a prototype
- Will write the methodology
- Will connect the camera to a raspberry pi and import OpenCV to use YOLO

Problems or challenges:

- Since the presentation for the midterm was the first long presentation in English, it was a challenge to prepare it even in the bad health conditions of a few team members who take charge of presenting.
- Elaborating details of the project was arduous as all the reasons for the definition, setting, or environment should be organized and convincing.
